

## THIRTY-EIGHT PLATES,

WITH

EXPLANATIONS;

INTENDED TO ILLUSTRATE

LINNÆUS's SYSTEM of VEGETABLES,

AND PARTICULARLY ADAPTED TO THE

LETTERS on the ELEMENTS of BOTANY.

By THOMAS MARTYN, B.D. F.R. छ L.S.S. REGIUS PROFESSOR OF BOTANY IN THE UNIVERSITY OF CAMBRIDGE,
LONDON:

PRINTED FOR B. AND J. WHITE, at horace's head, fleet-street.
Iヶ94.

## ( iii )

## ADVERTISEMENT.

$S_{\text {OLE }}$ perfons, who have honoured the Letters on the Elements of Botany with their approbation, having fignified a with that the fubject might be fill farther illuftrated by figures, Mr. Nodder, an ingenious artift, has been employed for this purpofe, and has both drawn and engraved thirtyeight plates. By there and the explanatons which are given on the oppofite

$$
\mathrm{A}_{2}
$$

page,

## ( iv )

page, the Author liapes that he may have met the ideas of his friends.

Tinefe plates, with their explanations, may be contidered as an entire work: but it is prefiumed that they will be much more fatisfacory when fudied jointly wh the letters.

Six plates are given to illeftrate Rouficau's fix letters upon the moft remarkable Natural Clafles. The ies are intended to explain the Claffes of Limmeus's Syftem, in thein ordur, except the thirty-fourth, which eahibits fi cures of the mof remarkable Nectaries. No general plate, caplanatory of the claffical chanetes, is given; both becaufe it has already been clegantly donc by Mir. Curtis, and aifo may cafily be collected from the particular plates of this work.

Thus

## ( v )

## Thus the character of the Clafs

( vi )

## (1) ( )

## PLATE I. LETTER I.

LILIACEOUS FLOWERS.
Lilium candidum. White Lily.
a The flower in bud.
$b$ The corolla expanding.
$c$ The corolla quite open.
$d$ The pistil or pointal. e The germ. $f$ The ftyle. $g$ The ftigma.
$b$ The fix flamens. i The filaments. $k$ The anthers.
l The germ advanced into a pericarp, which here is a capsule.
in A tranfverfe faction of the pericarp, to flow the three cells and feeds.

?

I) ramen is magremed ty siPs taller.

## (3)

## PLATEII. LETTER II.

 CRUCIFORM FLOWERS.Cheiranthus incanus. Stock-Gillifiower.
a A flower of the foock, fhowing the four petals and the cruciform fhape of the corolla.
b A back view of it, exhibiting the calyx, confifting of four leaflets, and bulging out at the bottom.
c A fingle petal feparated, to fhow the lower narrow part, called unguis, or the tail; and the upper fpreading part, named lamina, or the border, emarginate or notched at the end.
d A fection of the calyx, with the fingle piftil and fix ftamens in their proper fituation.
\& The fix famens, two of which are fenfibly finorter than the other four.
$f$ The piftil feparated from the other parts.
$g$ A fingle famen.
$b$ The fruit, feed-veffel, or pericarp, called
2 filique, opening from the bottom
B 2

## ( 4 )

upwards, and fhowing the tuvo valves, with the feeds ranged along the diffepiment, or partition, of the two cells, and the permanent ftigma at the top.
ikl Figures of filicles, or fmall fhort pods or pouches.
$i$ The flat triangular, or heart-fhaped filicle of the fhepherd's purfe.
$k$ The oblong filicle of fcurvy-grafs, both fhut and open.
? The almof fipherical flicle of candy-tuft. See Letter XXIII. and plate XXI.
c Explains the claffical cinaracter of the clafs Tetradynamia, and
$3 i k l$ Explain the characters of the two orders, Siliquefa and Siliculofa, into which it is divided.

## ( 5 )

## PLATE III. LETTER III.

PAPILIONACEOUS FLOWERS.
Pifum fativum. Garden Pea.
Fig. I. The peduncle or flower-ftem of the pea, fhowing the papilionaceous corolla in three different fituations.
a A young flower not fully expanded.
$b$ An expanded flower, fhowing the back; the ftandard, or banner, fully difplayed, and the calyx cleft into five parts.
r A fide view of an expanded flower, fhowing the banner, wings, and keel in their natural fituation.
Fig. 2. The banner (vexillum), obcordate or inverfely heart-fhaped, and emarginate.
3. The two wings (alde).
4. The keel (carina).
5. The piftil and ftamens in their natural fituation.

## ( 6 )

Fig. 6. The lower broad ftamen, which involves the germ, termínatiug in nine filaments, with an anther on each.
7. The upper narrow filament, accompanied with the pitil.
8. The pericarp, which is a legume, or pod, open to fhow the two valves and the feeds fattened alternately to the futures of the valves at the back of the legume. The permanent calyx is alfo here exhibited.
Dif. The character of the clafs Diedelpbia, and of the order Decandria, as alfo of the natural clafs of Leguminaus plants, is here explained.

## PLATE IV. LETTERIV.

## RINGENT FLOWERS.

Fig. I. Lamium album. White Dead Nettle.
a Part of a whorl of flowers, flowing how they grow in the bofom of a leaf.
$b$ A fingle flower, fhowing the ftructure of a labiate or ringent corolla, and of that of the Lamium in particular.
$\varepsilon$ The corolla cut away, in order to fhow more diftinctly the fituation of the ftamens and the claffical character.
$d$ The germs, with the fyle.
e The calyx, with the four feeds within it.
Fig. 2. Antirrhinum majus. Snapdragon.
a The clofed ringent, or perfonate corolla, in its natural form.
6 The corolla opened, to fhow the fituation of the ftamens.
c The capfule, with the permanent fyle and calyx.

$$
B_{4}
$$

Fig. 3. Digitalis purpurea. Purple Foxglove.
a A fingle flower, fhowing the open bellfhaped corolla.
$b$. The infide, exhibiting the fituation and ftructure of the famens.
c The germ, with the fyle.
d The capfule, with the fyle permanent.
$e$ A fection of the capfule.
$f$ A captuic, deprived in part of its outer fkin, to fhow the interior texture of the coat.

## PLATE V. LETTER V.

UMBELLATE FLOWERS.
Fig. I. Apium Petrofelinum. Garden Parfley.

Fig. 2. Aethufa Cynapium. Fool's Parley. a The three long leaflets of the partial involucre, fhowing a principal difference between this and the true Parfley.

Fig. 3. Scandix Cerefolium. Garden Cher vil.

Fig. 4. Sambucus nigra. Common Elder.
To fhow the difference between that and an umbellate plant.

Fig. 5. The flower of an umbellate plant magnified, to fhow the particular ftructure.
Obf. Inftances of compound umbels in Fig. I, 2, 3, and Fig. 1, 2, of Plate XIII. A fimple umbel is reprefented at Fig. 3, Plate XIII.

[^0]
## ( 11 )

## PLATE VI. LETTER VI. COMPOUND FLOWERS.

Fig. r. Bellis perennis. Common Daify.
a The flower, which is compound and of the radiated kind, having femiflorets or ligulate florets in the ray, and tubular florets in the difk.
$b$ A fection of the receptacle, with the florets on it.
c A femi-floret.
d The cylinder of anthers, with the ftyle perforating it.

- A floret.

Fig. 2. Leontodon Taraxacum. Dandelion.
a The whole compound flower, confifting entirely of femi-florets, called by Linnæus ligulate florets.
6 A fingle flofcule, or floret.
c The head of feeds.

## ( 12 )

Fig. 3.
Showing a flofculous flower, or a flower compofed of florets only, called by Linnæus tubular florets.
a The whole compound flowers.
$b$ A fingle flofcule.
c The back of a compound flower, fhowing the calyx.

Fig. 4. Trifolium pratenfe. Red Clover.
To fhow the difference between this, which is a head or acgregate of flowers, and a genuine compound flower, fuch as Fig. 1, 2, 3, exhibit.

## PLATE VII. LETTER XI.

MONANDRIA.
Fig. I. Canna indica. Indian Sbot.
a a a Three different views of the flower, the corolla cut into fix lanceolated parts, one of the three interior reflected.
$b$ The fcabrous germ, with
c The triphyllous perianth, or calyx, on the top of it.
d The anther growing to one of the petals, which ferves it for a filament.
$e$ The ftyle, growing to the petaliform filament.
$f$ The fcabrous capfule.
g Cut open to fhow the three cells.
Fig. 2. Hippuris vulgaris. Mare's Tail.
a a The germ.
$b$ The ftamen.
c The ftyle.

## ( 15 )

PLATE VIII. LETTER XII.
DIANDRIA.
Fig. ı. Veronica Chamædrys. Wild Speedwell.
a The wheel-fhaped corolla, divided into four fegments, the loweft (b) narrower than the reft.
c The capfule.
d The oval, wrinkled leaves, indented about the edge.

Fig. 2. Jafminum officinale. White jaf. mine.
a A front view of the monopetalous falver * fhaped corolla, divided into five fegments.
b A back view of the corolla.
c The tube of the corolla, with the anthers lying within it.
d The calyx, with the rudiment of the fruit.
e A leaf pinnated, with all the lobes diftinct.

## ( 16 )

Fig. 3. Salvia officinalis. Garden Sage.
a A flower.
$b$ The two flamens, fhowing their fingular ftructure.
c The piftil feparate.

## ( 17 )

## PLATE IX. LETTER XIII.

TRIANDRIA, DIGYNIA. GRASSES.
Fig. I. Lolium perenne. Ray Gra/s.
As an inftance of a fpiked grafs.
Fig. 2. Dactylis glomerata. Hard Grafs.
a The chaff or glume.
$6 b b$ The three ftamens.

- The two reflected ftyles, with the feathered figmas.

## (19)

## PLATE X. LETTER XIV

## TRIANDRIA MONOGYNIA.

Iris pumila.
a The fheath, or fpathe.
$b$ The corolla, confifting of fix parts, united at the bare.
cc The outer petals, called falls.
$d d$ The inner petals, called fandards.
e e The petal-form ftigma, each part concoaling one flamen under it.
$f$ A fingle flamen.
g The germ, inferior or below the corolla.
$b b$ The nectary, in a villous line along the reflected petals.

## (2i)

## PLATE XI. LETTER XV。 TETRANDRIA.

Fig. I. Scabiofa columbaria. Small Scabious.
An aggregate flower, confinting of many flofcules.
$b$ A fingle flofcule; the corolla cut into five irregular fegments, and the germ crowned with hairs.
$c$ The calyx, with the four ftamens and the piftil.

Fig. 2. Rubia peregrina. Wild Madder. An inftance of ftellated plants.

The fquare falk : the fellated leaves: the corolla of four fegments: the double germ below the flower.

Fig. 3. Plantago lanceolata. Ribrwort Plantain.
a The flowers growing in a fpike or oblong head.

C 3

## ( 22 )

$f$ The angular fcape.

- A fingle flower, exhibiting the quadrifid corolla and the very long filaments.
d The germ and ftyle.
$e$ The calyx, inclofing the capfule.

## (23)

## PLATE XII. LETTER XVI.

 PENTANDRIA MONOGYNIA.Fig. I. Nicotiana Tabacum. Common Tobacco.
a A flower-bud.
6 A flower, fhowing the funnel-fhaped corolla difplayed.
c The corolla removed, to fhow the five ftamens and piftil.
d A tranfverfe fection of the capfule.
Fig. 2. A flower of Dodecatheon Meadia.
Fig. 3. Convolvulus fepium. Great BindWeed.
a The corolla, with the involucre immediately below it, at Fig. 3.
$b$ The five ftamens difplayed.
c The germ, within the calyx, with the ftyle, terminated by the two ftigmas.
$\mathrm{C}_{4}$

Fig. 4. Lonicera Caprifolium. Garden Honeyfuckile.
a A flower, exhibiting the irregular monopetalous corolla.
$b$ The tube opened, to fhow the manner in which the filaments are fixed.
$c$ The pitilil.
Fig. 5. Vinco major. Gieat Perizuincle.
a The corolla, fhowing the bending of its five divifions, and the pentagon form of the faux, or opening of the tube.
$b$ The calyx divided to the bottom into five fegments; and the piftil with two ftigmas, one over the other.
c The tube of the corolla opened, to fhow the fituation of the five ftamens and form of the anthers.
d A fingle ftamen feparate.

## PLATE XIII. LETTER XVII. pentandria digrnia.

Fig. I. Sium nodiflorum. Creeping Water Parfnep.
To fhow the difference between this plant and water creffes, reprefented in Plate XXI.
a A pinnated leaf, the pinmx, finall or component leaves, longer and narrower than thofe of water creffes, ferrated on the edges and pointed at the end: the terminating pinna trifid.
$b$ A feffile umbel of flowers.
$c$. A fingle flower. - $d$ The fruit.
Fig. 2. Scandix Anthrifcus. Honlock Chervil.
To fhow the difference between that and Garden Chervil, Plate 5, Fig. 3 .
a An umbel of flowers.
$b$ An umbel of fruits.
Fig. 3. Scandix Pecten. Shepherd's Needle. or Venus's Comb.
a The umbels, being inftances of a fimple umbel.
$b$ The feeds, terminated by the long proceffes or beaks, which gave occafion to the names.

## ( 27 )

plate Xiv. Letter XViif. HEXANDRIA.

Fig. I. Tradefcantia Virginica. Virginian Spiderwort.
a The corolla of three petals.
$b b$ The three-leaved calyx.
$c$ One of the fringed filaments.
d The piftil.
Fig. 2. Narciffus Tazetta. Polyantbus Narciffus.
a The corolla in front, fhowing the fix equal petals, and the funnel or cup-fhaped nectary.
6 A back view of the flower, fhowing that the corolla is fuperior, or on the top of the germ.
$c$ The fpathe.
d The corolla opened, to fhow the fituation of the fix ftamens within the nectary.
e The piftil.

$, \ldots, \ldots, \therefore 1!1, \ldots+1$

## ( 29 )

## PLATE XV. LETTER XIX.

## HEPTANDRIA.

Fig. I. 狌fculus Hippocaftanum. Horfe Chefnut.
a The corolla of five petals, and the feven ftamens, with bending filaments.
$b$ The one-leafed calyx, fwelling at the bafe, and divided at top into five fegments.
c The young capfule terminated by the ftyle.
d A fingle ftamen.

## OCTANDRIA

Fig. 2. Oenothera biennis. Tree Primrofe.
a A flower, fhowing the four-parted calyx, and the corolla of four obcordate petals.
$b$ The eight ftamens, and the piftil in the middle, with the deflected calyx.
$c$ The piftil, with the filiform ftyle and the quadrifid ftigma.
d The capfule.

- A tranfverfe fection of the capfule, fhowing the four cells.
$f$ The feeds.

## ( 30 )

Fig. 3. Epilobium anguftifolium. French Willow.
a The flower.
$b$ The four-leaved calyx.
$c$ The ftamens, four longer and four fhorter.
d A fingle ftamen.
$c$ The pifil.
$f$ The capfule.
g. A feed crowned with down.

## ( $3^{1}$ )

## PLATE XVI. LETTER XIX. ENNEANDRIA HEXAGINIA.

Fig. I. Butomus umbellatus. Flowering Ru/h.
a The flower of fix petals.
$b$ The nine ftamens.
c The fix capfules.
DECANDRIA MONOGTNIA.
Fig. 2. Dictamnus albus. Fraxinella.
a The flower, with a corolla of five fpreading petals.
$b$ 'The five-leaved calyx, with the capfules.
$c$ A fingle filament, with its glandules.

$$
-\frac{1}{i}-\frac{1}{1}-\frac{1}{6}-
$$

$$
-1-\sqrt[1]{1}=
$$

## ( 33 )

PLATE XVII. LETTER XX.

DODECANDRIA DODECAGYNIA.

Sempervivum tectorum. Common Houfeleek.
a The flower-ftem, with a reflexed range of flowers.
$b$ A flower in front, fhowing the corolla of twelve petals.
c The calyx, with the capfules, after the flower is paft.
d A fingle capfule.
e The twelve ftamens and twelve ftyles, feparated from the flower.
$f$ A fingle piftil, exhibiting the germ, ftyle, and anther.
$g$ Two ftamens.

## ( 35 )

## PLATE XVIII. LETTER XXI.

$$
I C O S A N D R I A .
$$

Fig. 1. Myrtus communis. Common Myrtle.
a The corolla.
$b$ The fruit or berry.
c A fingle flower without the corolla, fhowing the famens proceeding from the calyx.

Fig. 2. Pyrus Cydonia. The 2uince.
Obf. The letter $a$ is by miftake placed too low in the plate.

## ( 37 )

## PLATE XIX. LETTER XXI.

POLTANDRIA.

Fig. 1. Caltha paluftris. Mar/b Marigold.
a A flower fhowing the corolla of five petals, the many famens fhorter than the corolla, \&c.
6 Another flower, fhowing that it has no calyx.
$c$ The capfules, after the flower is paft.
Fig. 2. Papaver Rhoeas. Corn Poppy.
a The corolla of four large roundifh petals.
$b$ The numerous ftamens proceeding from the receptacle.
6 The capfule crowned with its ftigma.
Obf . Fig. I. is an inftance of the order Polygynia. Fig. 2. of the order Monngynia.

## (39)

## PLATE XX. LETTER XXII.

## DIDYNAMIA GYMNOSPERMIA.

Fig. I. Glechoma hederacea. Ground Ivy.
a The kidney-fhaped leaves.
$b$ The ringent flowers.
c A flower opened, to flow the fituation of the Itamens.
d A flower exhibiting the cruciform appearance of the anthers.
e The calyxes.
$f$ A fingle filament.
$g$ The piftil. DIDINAMIA ANGIOSPERMIA.

Fig. 2. Bignonia radicans. Trumpet. Flower.
a The calyx.
$b$ The corolla.
c The corolla difplayed, to flow the fituatimon of the flamens.
d The pistil.
Obf . The claffical character is clearly shown at Fig. 2.c.
This clafs was farther illustrated in Plate IV.
D 4

## (41 )

## PLATE XXI. LETTER XXII.

## TETRADYNAMIA.

Sifymbrium Nafturtium. Water Cre/s.
a a The pinnated leaves,
$b$ The odd lobe ending blunt.
c The corymb of flowers,
d A fingle four-petalled cruciform flower.
$e$ A fingle petal.
$f$ The calyx.
$g$ The calyx, with the ftamens.
$b$ A fingle ftamen.
; The filique.
Compare Plate XIII. See alfo Plate II.

## (43)

PLATE XXII. LETTER XXIV. MONADELPHIA.

Fig. I. Althra officiualis. Mar/b Mallow.
a The flower fhowing the five petals united at bottom, obcordate or inverfely heartfhaped, and flightly emarginated or end-nicked. In the centre is the column of ftamens, with the pifitis in the middle of them.
3 The column of ftamens and piftils removed from the corolla, and fhowing the rudiment of the fruit underneath.
c. The piftil feparate.
d The calyx, exhibiting the nine divifions of the outer calyx, which is one of the principal generic characters.

Fig. 2. Malva fylveftris. Common Mallow.
a The flower as before. The petals narrow, heart-flhaped, and much more deeply end-nicked.
bo The column of famens, and piftil feparated.
d The fruit, with the double calyx ; the outer very narrow, the clefts of the
immer broad and large : there are five of there and three diftinct leaves in the other; but all of them could not be reprefented. The fruit flat, with many feeds in a ring, each covered with its aril, or loofe coat.

Fig. 3. Geranium zonale. Horfe-boe Cranefbill.
a The flower, fhowing the corolla of five unequal petals, with the column of ftamens, very flightly connected at bottom, and of unequal lengths.
b The calyx, with the column of ftamens. Both thefe figures thow the fiyle itanding up above the ftamens, and terminated by five ftigmas.
c The fruit with the permanent Alyle and fligmas; fhowing the beaked form of it, a:d the five feeds in their arils, each terminated by a tail, and feparating from the beak. $a b c$ fhow that the calyx is fingle and five-leaved,
N. B. Thele figures ferve to explain the clafo monadelpbia: and two of the orders, decandria, Fig. 3, and polyandria, Fig. I, 2.

Ci mumen evengraved ly. Th: lowlem:

## ( 45 )

## PLATE XXIII. LETTER XXV.

DIADELPHIA DECANDRIA.
Lathyrus latifolius. Everlafing Pea.
Fig. I. A bunch of flowers, in their natural fize and fituation.
Fig. 2. The banner.
Fig. 3. One of the wings.
Fig. 4. The keel.
Fig. 5. The flamens and pistil in their narural fituation.
Fig. 6. The flamens, flowing the fimple filament feparate from the compound one.
Fig. 7. The pistil.
See Plate III.

## ( 47 )

## PLATE XXIV. LETTER XXV.

## POLTADELPHIA.

Hypericum Afcyron. Garden Tutfan.
s The flower, with a corolla of five petals and the numerous ftamens in the middle.
6 A fingle pencil or parcel of ftamens.
6 The permanent five-parted calyx, including the germ terminated by five piftils.
b. Explains the characters of the clafs and order-Polyadelphia Polyandria.

Intore is isemmend loy will fider: $=$ )

## ( 49 )

## PLATE XXV. LETTER XXVI.

SINGENESIA POLYGAMIA RXUALIS.
Fig. I. Tragopogon porrifolium. Salfafy.
a A flower clofed, fhowing the fimple calyx.
6 A fingle ligulate flofcule.
c A flofcule, deprived of the corolla.
d A feed, with the feathered ftipitate down.
e The cylinder of anthers, with the piftil perforating it, terminated by the two revolute ftigmas.
$f$ The cylinder of anthers alone.
Fig. 2. Carduus nutans. Muk Thiftle.
a The compound flower, fhowing the calyx all imbricate with thorny fcales.
$b$ A front view of the whole compound flower, compofed wholly of tubulous florets.
c A fingle flofcule or floret.
d The cylinder of anthers.
$e$ The pitil.

## ( 50 )

Fig. 3. Eupatorium cannabinum: Common Hemp Agrimony.
a A bunch of flowers.
$b$ A fingle flower.
c. A fingle bunch of flowers.
d The down.
Obf . There three figures explain the three factions of this order. I. Contraining compound flowers with ligulate florets only. 2. The capitate, or headed flowers, with tubulous florets only. 3. The difcoid, or naked difcous flowers, with tubulous florets, but not in a head.

## PLATE XXVI. LETTER XXVI.

SYNGENESIA POLIGAMIA SUPERFLUA.
Doronicum pardalianches. Common Leopard's Banc.
a The compound radiated flower, confifting of regular tubulous flofcules in the difk, and irregular ligulate flofcules in the ray.
$b$ The under part of the flower, fhowing the double row of fcales to the calyx.
c One of the femi-florets, or ligulate flofcules, taken from the ray, to fhow that the feed is naked, or deftitute of down.
d A floret from the difk, the feed of which is crowned with a fimple down.
e A fection of the difk, in order to exhibit the naked receptacle.

## ( 53 )

## PLATE XXVII. LETTER XXVI.

SYNGEN. POLYG. FRUSTRANEA and NECESSARIA.

Fig. 1. Centaurea montana. Mountain Blue Bottle.
a The compound flower, fhowing the neutral or barren florets on the outfide, longer than the fertile ones in the middle, and the ciliated fcales of the calyx.
$b$ A barren floret.
c A fertile floret, with fome of the briftles at the bafe.
d The fame, divefted of the corolla.
$e$ The piftil.
N. B. This ferves to explain the order Polygamia Fruftranea in the clafs Syngenefia.

Fig. 2. Calendula officinalis. Garden Marigold.
a The compound radiated flower.
$b$ The calyx, with the feeds in the ray only, bending inwards after the florets are decayed.

## (54)

c The boat-fhaped muricated feed, without down.
d A barren feed, from one of the central flowers.
e A fertile flofcule from the ray.
$f$ A barren flofeule from the ditk.
N. B. This ferves to explain the order Poly. gamia Neceffaria in the clafs Syngeneffa,

## ( 55 )

## PLATE XXVIII. LETTER XXVI.

 SYNGEN. POLYG. SEGREGATA.Echinops fphærocephalus. Globe Thiffle.
a The entire compound flower, confifting of tubular florets, feparated by their proper perianths; which determines this plant to be of the fegregate order in the clafs Syngenefia.
$b$ A finuated leaf, the jags ending in fpines.
c A fingle flofcule in its calyx.
d A flofcule taken out of the calyx, with the ftyle feparate.
e A fingle fubulate leaflet of the calyx, in three different views.

## ( 57 )

## PLATE XXIX. LETTER XXV.

SYNGENESIA MONOGAMIA.
Viola odorata. Sweet Violet.
a The calyx of five leaves.
$b$ The corolla of five irregular petals.
c The horn-fhaped nectary.
d A flower opened, to thow the famens with the five connected anthers.
$e$ The famens within the calyx.
$f$ A fingle ftamen.
$g$ The pifilil.
$b b b$ The heart-fhaped leaves.
ii The young leaves, involuted, rolled inwards, or rather upwards.
$k k k$ The fcape, with the double bracie on the middle of it.
$l$ One of the ftolones, or runners, putting forth roots.

## ( 59 )

PLATE XXX. LETTER XXVII. GTNANDRIA.

Paffiflora cærulea. Blue Pafion Flower.
a The palmated leaf.
$b$ The corolla and calyx, each of five leaves, and having the fame appearance in front.
c The radiate crown, which is the nectary.
d The piftil and five ftamens.
\& The anthers terminating the filaments, which fring from the bottom of the germ, where it meets the pedicle, upon which it ftands.
Iff The three ftigmas arifing from the germ.

## (61)

## PLATE XXXI. LETTER XXVIII.

MONOECIA.

Momordica Elaterium. Spirting Cucumber.
a a The male or ftaminiferous flowers.
bb The female or pifilliferous flowers, with the large germ below the receptacle.
$\epsilon$ The male flower, fhowing the three filaments, with double anthers on two of them, and a fimple anther on the third.
d The germ, furmounted with the ftyle, divided into three parts, each part fuftaining an oblong gibbous ftigma.
e The divided part of the ftyle, with the ftigmas.
$f$ Two different views of a fingle figma.

## ( 63 )

## PLATE XXXII. LETTER XXIX.

DIO ECIA.

Cannabis fativa. Hemp,
Fig. I. Female Hemp.
a A fingle female flower.
$b$ The feed included within the calyx.
Fig. 2. Male Hemp.
a Male flowers feparate.

## ( 65 )

## plate XXXiII. LETTER XXX.

 POLYGAMIA MONOECIA.Acer campeftre. Common Maple.
a a The lobed leaves.
66 Bunches of flowers. - $c$ Perfect. d Male, with ftamens only.
$e$ A fingle perfect flower.
$f$ A petal.
$g$ A perfect flower divefted of the corolla and calyx.
b A fingle ftamen.
$i$ The pittil, with the two revolute ftigmas and the rudiment of the two capfules, terminating in a wing.
k A male, or ftaminiferous flower, and a fingle petal of it.

$$
\begin{aligned}
